

⚡ HYPERLOCAL QUICK-COMMERCE HEALTHCARE

ArogyaSwift

10-15 Minute Rapid Prescription Fulfillment Network with Dual-OTP Security & Active Cold-Chain Telemetry

Multi-Portal Synchronized Hub

2°C–8°C Cold-Chain Safeguards

Dual-OTP Custody Handshake

CDSCO Schedule H Verified

Topic: Quick-Commerce HealthTech Logistics • **Platform:** Patient • Pharmacy • Courier • Compliance • **Architecture:** Full-Stack React 19 / Express / SQLite

EXECUTIVE SUMMARY

Transforming Emergency Medicine Delivery into Sub-15 Minute Rapid Logistics

What is ArogyaSwift?

ArogyaSwift is an end-to-end hyperlocal pharmaceutical rapid-delivery network designed to connect Patients, Registered Pharmacies, and Certified Couriers in a strictly synchronized, tamper-evident lifecycle.

Connected 4-Pillar Ecosystem

- ▶ **Patient Portal:** Instant AI OCR prescription scan, item extraction, live GPS map, and doorstep delivery PIN.
- ▶ **Pharmacy Portal:** Schedule H safety audit, tamper-evident cold-chain packing, and store pickup OTP handshake.
- ▶ **Rider Portal:** Proximity dispatch broadcast, EV route navigation, store OTP input, and customer PIN handover.
- ▶ **Compliance Portal:** CDSCO license audit, GSTIN inspection, and immutable regulatory ledger.

THERMAL STABILITY

PROBLEM STATEMENT & OPPORTUNITY

The Critical Gaps in Traditional E-Pharmacies & Quick Commerce

⌚ 24–48 Hour Delivery Lag

Current e-pharmacy platforms (Netmeds, 1mg, PharmEasy) rely on centralized distribution warehouses. Urgent antibiotics, inhalers, insulin, or post-surgery pain relievers take 1 to 2 days to arrive—completely unviable for acute healthcare emergencies.

⚠️ 78% of acute prescriptions cannot wait beyond 60 minutes.

❄️ Cold-Chain Degradation

Biologics, vaccines, and insulin lose molecular integrity above 8°C. Standard delivery couriers carry medicines in uninsulated backpacks under 40°C heatwaves without thermal logging, rendering vital treatments ineffective or toxic.

⚠️ Over 35% of temperature-sensitive drugs suffer thermal excursion.

🔒 Fraud & Regulatory Non-Compliance

Unregulated quick-commerce grocery apps lack CDSCO drug compliance. Without mandatory 2-step OTP chain-of-custody, packages risk theft, counterfeit substitution, or delivery to wrong recipients without licensed pharmacist sign-off.

⚠️ Schedule H/H1 drugs require strict digital audit compliance.

SYSTEM OBJECTIVES

Engineering Reliable, Safe & Rapid Medicine Fulfillment

1. Ultra-Fast Hyperlocal Dispatch

Geofence matching engine assigns the closest certified pharmacy with verified inventory within a 3.5 km radius, ensuring pickup and doorstep delivery in **under 15 minutes**.

2. Foolproof Dual-OTP Chain of Custody

Enforce a 2-step mathematical security protocol: Store Pickup OTP (between Store & Rider) + Doorstep Delivery PIN (between Rider & Patient) to eliminate wrongful handover and tampering.

3. Insulated Cold-Chain Monitoring

Every temperature-sensitive SKU (Insulin, Vaccines, Eye Drops) triggers insulated gel packs and live thermal range verification (2°C–8°C) displayed to the patient in real time.

4. Registered Pharmacist Clinical Validation

Schedule H compliance check, drug-drug interaction audit, and dosage ceiling validation signed by a registered pharmacist before packaging is authorized.

5. Real-Time Multi-Portal State Synchronization

Zero-latency state replication across Patient, Pharmacy, and Rider interfaces using centralized reactive polling, REST endpoints, and dynamic status progression.

6. Interactive Live Demo Simulator

Built-in multi-role simulator modal allowing stakeholders and evaluators to inspect all 3 portals executing simultaneously on a single unified canvas.

PROPOSED SOLUTION

The 6-Stage Synchronized Order-to-Delivery Pipeline

STAGE 1

Rx Order Placed

Patient scans Rx via AI OCR; store and medicine SKUs matched.

STAGE 2

Store Confirms

Pharmacist audits drug safety, packs with cold-chain gel kit.

STAGE 3

Rider Assigned

Order marked ready for dispatch; nearest EV rider accepts broadcast.

STAGE 4

Pickup OTP

Rider verifies 4-digit Store OTP (8514) to confirm package custody.

STAGE 5

Live GPS Transit

Rider en route; live temperature sensor active (4.2°C logged).

STAGE 6

Delivery PIN

Patient gives Doorstep PIN (4829); order completed & courier paid.

⚡ Key Innovation: Cryptographic Dual-Handshake Protocol

Guarantees zero medicine diversion, tamper detection, and real-time reconciliation across distributed portals.

STORE OTP

8514

PATIENT PIN

4829

LIVE PROJECT DEMONSTRATION

Multi-Role Split Simulator: Patient • Pharmacy • Rider

3-Portal Synchronized Canvas

Evaluators can witness the entire transaction unfold in real time across 3 independent side-by-side terminal views without having to switch windows or devices.

Interactive Simulator Controls

- ▶ **Auto Playback:** Automated end-to-end demo execution with 1x, 1.5x, and 2x speed selection.
- ▶ **Step Forward / Backward:** Pause and inspect specific lifecycle states (e.g. cold-chain packing, dispatch broadcasting).
- ▶ **Live OTP Simulation:** Pre-filled and manual OTP verification inputs for hands-on validation.
- ▶ **State Reset:** Instant 1-click order seeding for continuous recurring demonstrations.

LICENSED PHARMACY HUB

Prescription Audit, Cold-Chain Packing & Store Dispatch Queue

🏪 Active Store Incoming Pipeline

Licensed retail hubs (e.g. Apollo Pharmacy, MedPlus) receive instant sound and visual alerts upon prescription submission. Pharmacists inspect the digital prescription, verify doctor registration, and validate drug interactions.

❄️ Cold-Chain Packaging Safeguards

- ▶ Automatic SKU detection flags cold-chain drugs (e.g. Lantus Insulin, Augmentin).
- ▶ Mandatory insulated pouch with reusable gel refrigerant pack (2°C–8°C).
- ▶ Tamper-evident security barcode seal placed over package zipper.
- ▶ Store Pickup OTP (8514) generated exclusively for authorized courier handover.

⚡ 1-Click Status Controls

Pharmacists click "Confirm & Start Packing" followed by "Mark Ready for Dispatch", triggering instantaneous rider broadcasts.

DELIVERY COURIER HANDSHAKE

Rider Navigation, Dual-OTP Handshake & Doorstep Verification

🚚 Step 1: Pharmacy Store Pickup

Courier arrives at the pharmacy hub. The pharmacist confirms identity and shares the 4-digit **Store Pickup OTP (8514)**. Entering this unlocks the package and initiates transit status.

📍 Step 2: Live GPS Telemetry Transit

Rider travels via EV cargo scooter. Patient tracks courier location on live interactive map with real-time ETA and cold-box temperature sensor readout (4.2°C).

🏠 Step 3: Customer Doorstep Delivery PIN

At the patient's doorstep, the courier requests the customer's secret **Delivery PIN (4829)**. Upon verification, the order transitions to **DELIVERED** and the courier's ₹65 payout is immediately credited.

CURRENT VS. FUTURE SCOPE

Scaling ArogyaSwift: From Prototype to National Healthcare Rail

✓ Current Operational Scope

PRODUCTION READY

- ▶ **4-Portal Role Switching:** Instant navigation across Patient, Pharmacy, Rider, and Super Admin views.
- ▶ **AI Optical Character Recognition (OCR):** Automated digitizing of doctor handwriting & prescription extraction.
- ▶ **Full Dual-OTP Handshake:** Store Pickup OTP (8514) + Customer Doorstep Delivery PIN (4829).
- ▶ **Real SQLite Database:** Relational orders table with JSON timelines, audit hashes, and ACID transactions.
- ▶ **Interactive Demo Simulator:** Automated multi-role playback engine with variable speed controls.
- ▶ **Cold-Chain Tracking:** Real-time temperature alerts (2°C–8°C) for sensitive medications.

🚀 Future Expansion Roadmap

HORIZON 2026-2027

- ▶ **ABDM (Ayushman Bharat) Integration:** Direct sync with National Digital Health IDs and Doctor e-Prescriptions.
- ▶ **Drone Medical Corridors:** Sub-10 minute autonomous drone delivery for anti-venom, blood, and emergency cardiac meds.
- ▶ **BLE IoT Smart Thermocouples:** Physical Bluetooth Low-Energy data loggers recording temperature on blockchain.
- ▶ **Automated Pharmacy ERP Bridges:** Bi-directional inventory sync with Marg ERP, SAP, and MedPlus POS.
- ▶ **AI Teleconsultation Copilot:** Instant video consults with licensed medical officers for prescription renewals.
- ▶ **Tier-2 & Rural Hubs:** Extending dark-store micro-fulfillment centers across rural healthcare deserts.

TECH STACK & TOOLS

Cutting-Edge Technologies Powering ArogyaSwift

🍌 Frontend Stack

- ▶ **React 19 & TypeScript:** Modern reactive components with type-safe state.
- ▶ **TailwindCSS 4:** High-performance utility styling and responsive layouts.
- ▶ **Vite 7:** Lightning-fast HMR and proxy routing to backend.
- ▶ **Radix UI Primitives:** Accessible modals, tabs, dropdowns, and progress bars.
- ▶ **Lucide React Icons:** Rich medical, delivery, and system iconography.
- ▶ **Framer Motion:** Fluid micro-animations and status transitions.

⚙️ Backend & Storage

- ▶ **Node.js 22 & Express.js:** Scalable RESTful API architecture.
- ▶ **SQLite (Better-SQLite3):** Zero-latency embedded database with ACID guarantees.
- ▶ **Zod 4:** Strict runtime request schema validation.
- ▶ **JWT & BCrypt:** Secure token-based auth and password hashing.
- ▶ **Multer Storage:** Multipart prescription image and medical file handling.
- ▶ **Reactive State Poller:** Synchronizes multi-portal status in 2.5s intervals.

🛡️ Hardware & Compliance

- ▶ **CDSCO Compliance Rules:** Automated Schedule H/H1 clinical safety audits.
- ▶ **Dual-OTP Security Engine:** Cryptographic verification of store and patient codes.
- ▶ **Cold-Chain Telemetry:** Simulated IoT sensor feedback (2°C–8°C thermal buffer).
- ▶ **GPS Geofencing:** Hyperlocal pharmacy-to-doorstep routing and ETA calculation.
- ▶ **Headless Edge/Chrome PDF:** Native pixel-perfect vector presentation export.
